N1 IMPLANT

Can Neuralink fix Alzheimer's?
It can fix pretty much anything that's wrong with the brain." Other benefits Neuralink can provide include restoring limb functionality, loss of memory from Alzheimer's.

Treating memory loss
> Immortality!

Neuralink has a bright future for sure and it can even help or reach immortality using its chip. As if the chip stores the information immortality can be reached in an indirect way as we have our brain"s data stored and we can change the body and then our brain will be in a completely diffrent body but actually our brain in it! though it seems next to impossible but it will be a groundbreaking research in the field of Science and technology
